## **EView Technology extends capabilities of Microsoft System Center Operations Manager 2007 to include enterprise operations of the IBM OS/400 (iSeries-AS/400) server environments**

EView/400i Management for Microsoft System Center Operations Manager environments allows enterprise operations greater control by integrating iSeries (AS/400) systems; optimizing operational efficiencies and cutting costs by centralizing operations event and system performance management in a cost-effective manner.

**[Las Vegas, NV] — April 28, 2009** — EView Technology announced today the availability of EView/400i Management product integration into Microsoft System Center Operations Manager 2007 in the third quarter of 2009. EView Technology has extended the capabilities of EView/400i product family to work with SCOM, providing customers with updated support and comprehensive features to proactively monitor and automate events from iSeries and AS/400 systems before they have a negative impact on the organization.

EView/400i for Microsoft System Center Operations Manager enables customers to establish proactive enterprise operations management to monitor, correlate, control, and report the performance and health IT environment including the IBM iSeries (AS/400) domains. Advanced capabilities, including 2-way communication with the iSeries systems, accelerate problem resolution based on events coming from the QSYSOPR message queue and other business critical message queues. Also, EView/400i provides monitoring of operating system performance data and enhanced audit journal monitoring capabilities to assist in government mandated compliance

“EView/400i further enhances the seamless integration of the IBM iSeries (AS/400) environment in Microsoft System Center Operations Manager, by bringing together enterprise operations under a common operations platform. EView/400i extends the ability for customers to lower costs, automate

and simplify operations, reduce risk, and obtain immediate costs savings and return on the investment (ROI) ,” said Ellis Gregory, President, EView Technology. “We are excited about the opportunity to extend our proven IT Operations management technology to the Microsoft platform. “

The EView Technology solutions allow customers to take immediate corrective action, using the EView/400i management pack important or critical events by monitoring the status and health of the OS/400 systems and their standard applications. Collection sources span any messages which go through the operator console. EView/400i coexists with existing tools to provide flexibility, reduce complexity, and lowering operations cost in managing IBM legacy environments.

### **About EView Technology**

Founded in 2000, EView Technology focus and expertise is on providing solutions which enable IT enterprise operations greater control by consolidating management of IBM legacy server environments (mainframe and iSeries -AS/400) into industry leading operations management platforms. EView Technology’s enterprise operations management products and solutions enable customers to increase the efficiency of their system operations by integrating the real-time monitoring and automatic or operations assisted control of mainframe (OS/390 & z/OS) and AS/400 (iSeries) computing environments on a single console via the industry leading Operations Management platforms. EView/390z Management and EView/400i Management extend management of the IT environment to the mainframe and AS/400 (iSeries) domains – improving the economic performance of existing IT assets.

By bringing together enterprise operations under a common operations platform, EView solutions enable customers to lower costs, automate and simplify operations, and reduce risk. Hundreds of customers worldwide in over 30 countries rely on EView Technology as an integral part of their IT Operations.

EView Technology is a Microsoft Partner, HP Software Platinum/Gold Enterprise Management Alliance Partner, and IBM Development Partner. [www.eview-tech.com](http://www.eview-tech.com)
